We produce conveyer rollers from steel, niro, aluminium and plastic. Galvanized steel conveyor rollers, epoxyd-resin coated, nitro coated, coated with PVC, PU and rubber

Further information you will find under www.rollex-group.com or by a personal consultation.

Long-Distance Runner

The outstanding quality in the production of Rollex Rollers guaranties reliability. The quality of the design, the workmanship and the materials used for the rollers are geared towards quality and a long life.

The materials used are selected carefully. This guarantees a long life an impressive performance for the whole distance, from the start to the finishing line.

The Equipment

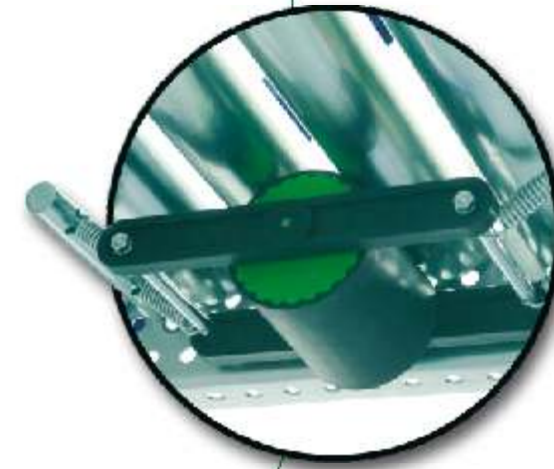

The experienced long-distance runner knows how important the right equipment is.

Therefore choose your personal accessories from our extensive range of products. From the reel rail to the multi directional roller...

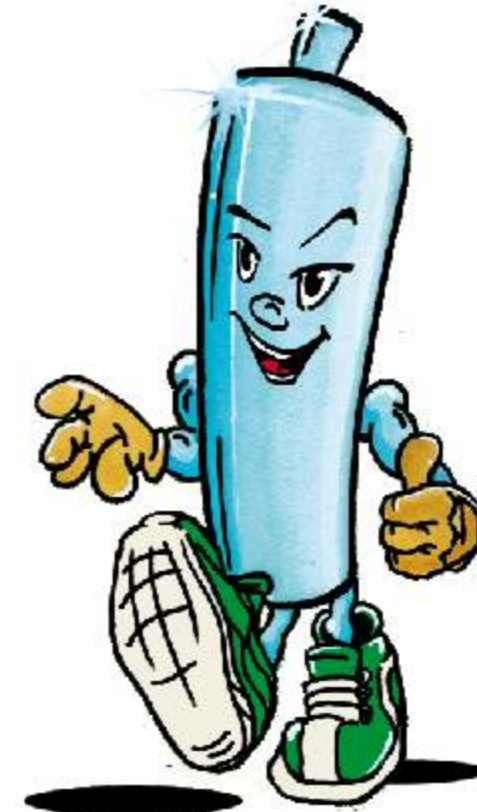

The Fast Runner

Fast sprinting wherever time and speed are important: Your errand boy carries your light packages in record time across the finishing line. For your success in sports choose between steel, plastic or coated rollers, which make it easier on your packaging materials and leads you to a successful finished product.

The Track Inspector

Each track is different, and high speed is not always everything. Your new errand boy divides up his track in an optimal way. With break rollers for permanent speed control with a maximum of 0.2 meters per second, so that your goods do not overshoot their mark.

The Self-Runner

For slope-free terrains choose your favourite self-runner:

rollers driven by gear wheel, timing belt or as well round-belt. Put your money on the winner from the starting line.
